

## INVISIBLE TILT™

### Unobstructed View

New InvisibleTilt™ is an innovative louver tilting mechanism which allows you to operate your shutters effortlessly while enjoying the unobstructed view.

### Tight and Even Closure

With just a gentle push, the system moves in a linear direction, guiding the louvers to always move in sync and align in any position. Your shutter will always close tightly and evenly, eliminating the gaps in between louvers and rails.

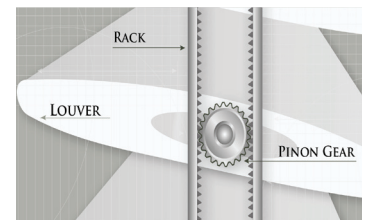

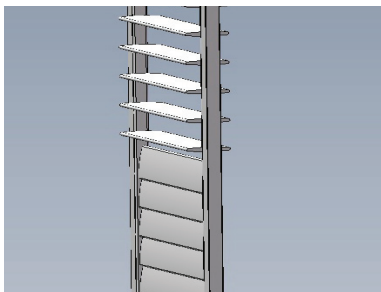

### Less Louver Clearance Needed

InvisibleTilt™ is perfect for shallow depth windows and doors. With the tilting mechanism completely concealed in the stile, no additional clearance (other than louver clearance) is necessary.

### Split Control

Shutters with InvisibleTilt™ give you the wide open, unobstructed view without clutter. Within a specific height limit, you can achieve separate control of upper and lower louvers without adding a divider rail.

InvisibleTilt™ is driven by rack-and-pinion gear system that is embedded within the shutter stile.

Contact your sales manager now for details on InvisibleTilt™.

Now available in all Norman® shutters at 10% surcharge
